

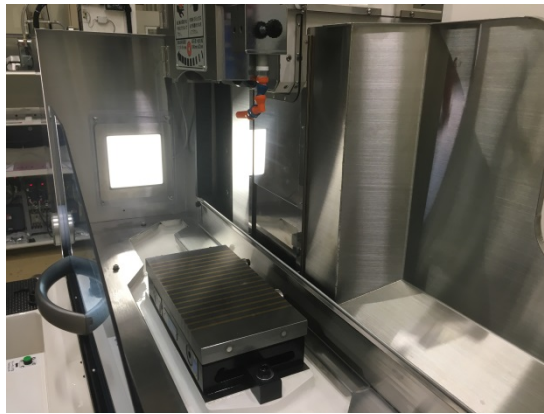

Exhibition of Machine Tool equipped with our OLED

Machine Tool equipped with our OLED is exhibited In JIMTOF 2016 (Japan International Machine TOols Fair)

Kuroda Precision Industries Ltd. developed this machine “Precise Surface Grinding Machine GS-30FL II”, customized for JIMTOF 2016, and uses OLED as its lighting for adjustment.

They appreciate our OLED at the following points;

- 1) compared with the current lighting, it would alleviate a fatigue of worker’s eyes,
- 2) adjustment work would be done more easily due to the uniform emission.

We focus on the market of Industrial Machine, including Machine Tools, because OLED would be used widely due to its many features, such as thin, light, uniform emission and so on.

Japan International Machine TOols Fair (JIMTOF2016)

From Nov. 17 to 22, 2016 at Tokyo Big Sight
